

A digital era is now on our way and GEN is part of it

Dr. Juan Carlos González Durán

GEN is a scientific and periodic magazine. It represents the official body of the Venezuelan Society of Gastroenterology. Since its foundation in 1946, GEN has presented a variety of changes related to its printed version. In 2015, this magazine began to turn itself into a digital format, thus becoming a scientific magazine, published periodically, but on a digital format, and presenting complete texts which are accessible in the Internet. Nevertheless, it still keeps its distinguishing features in terms of architecture, interactions, functions and distribution, all related to the specificity of the digital environment.

GEN, which was presented in a digital format from volume 70, will have a new presentation in the Internet. This new format will provide comprehensive benefits to its readers, making easier the access to documents, and including very valuable elements, such as, hypertext, audio and video. These features present a very high-speed access rate when publishing both on our domain and on the servers we are indexed in. The accessibility will make the audience increased nation-wide and abroad, which will be supported by its complied periodic appearances, a table of contents and ISSN Digital, summaries and key words in two languages, bibliographic references, identification details in the cover, authors' membership, date for accepting and receiving original documents, instructions for authors, constant participation of the Editor-Director, associate editors, international committee, editorial council and honorary editors.

Thanks to its new format online, we are confident that GEN Digital will be considered an ergonomic magazine, where readers will be able to read and look up for information comfortably. GEN Digital reaches and reinforces readability, thanks, not only to how the quality of typography and graphic design are kept, being its most highlighted feature: the relevant usage of resources, which enriches and/or complements the text, but also to how this magazine includes new strategies, provided by its new format. This fact optimizes the access to the magazine and will make downloading of articles and their contents easier.

A digital era is now on our way and GEN is part of it.

Welcome to GEN Magazine
